Congenital scoliosis results from embryological malformation of one or more vertebrae and may occur in any location of the spine.

This is due to a problem with the formation of vertebrae or fused ribs during prenatal development. The vertebral anomalies cause curvature and other deformities of the spine and lead to differential growth. This means that one area of the spinal column lengthens at a slower rate than the remainder. Because these anomalies are present at birth, congenital scoliosis is usually detected at a younger age than is idiopathic scoliosis. Generic medicines are becoming a larger
